

Comparison group methodology for computing the linear distance among campuses

Distance =

$$\sqrt{(\text{size}_A - \text{size}_B)^2 + (\text{econ}_A - \text{econ}_B)^2 + (\text{ell}_A - \text{ell}_B)^2 + (\text{mobil}_A - \text{mobil}_B)^2 + (\text{low}_A - \text{low}_B)^2 + (\text{high}_A - \text{high}_B)^2}$$

Where:

size<sub>A</sub> = 100 \* (campus size for campus A / maximum campus size statewide by campus type )

size<sub>B</sub> = 100 \* (campus size for campus B / maximum campus size statewide by campus type )

econ<sub>A</sub> = percent of fall PEIMS enrollment that is economically disadvantaged for campus A

econ<sub>B</sub> = percent of fall PEIMS enrollment that is economically disadvantaged for campus B

ell<sub>A</sub> = percent of fall PEIMS enrollment that is identified as E12.2(6)-24.4( - . <3A[(E12=)3.7( p)-12301idontificat-18.guJ 0
